Common Container Types

We can support your shipments with the following commonly used container types, depending on your cargo's size, weight and specific requirements:

20' Standard Container (20'GP)

Approx. internal dimensions: **5.9 m (L) × 2.35 m (W) × 2.39 m (H)**
Approx. internal volume: **33 m³**
Best for smaller shipments, dense materials, or heavier cargo that does not require a lot of space.

40' Standard Container (40'GP)

Approx. internal dimensions: **12.03 m (L) × 2.35 m (W) × 2.39 m (H)**
Approx. internal volume: **67 m³**
A suitable choice for larger volumes of general cargo within standard height limits.

40' High Cube Container (40'HC)

Approx. internal dimensions: **12.03 m (L) × 2.35 m (W) × 2.69 m (H)**
Approx. internal volume: **76 m³**
Offers additional height, making it ideal for tall, bulky or volumetric cargo.

Refrigerated Container (Reefer)

Approx. internal dimensions: **similar to standard 20' and 40' containers**

Approx. internal volume: **26–28 m³ (20') / 60–67 m³ (40')**
Designed for **temperature-controlled cargo**, such as food products, pharmaceuticals, or goods that require consistent refrigeration during transport.

Open-Top Container

Approx. internal dimensions: **similar base to 20' or 40' GP; open roof with tarp coverage**
Suitable for **oversized cargo that cannot be loaded through standard doors**, including machinery, tall equipment, or goods requiring crane loading from above.

Flat-Rack Container

Dimensions vary by size (20' or 40')
A flat platform with end walls but **no side walls**, ideal for **heavy, oversized or irregularly shaped cargo** such as large machinery, steel components, vehicles or construction equipment.
